

What are Perfect Aligners?

Perfect Aligners are a series of invisible, removable orthodontic retainers that fit over your teeth. They are custom-made to your teeth to guarantee a perfect fit. In order to get the smile you always wanted, simply wear your aligners every day. You only remove them to eat, drink, brush and floss.

Step by step, Perfect Aligner will correct your teeth. By applying gentle pressure your teeth are straightened and efficiently moved into the desired position.

With Perfect Aligner you can carry on life as usual. And the closer you get to completing your treatment, the more confident you will feel.

To find out how perfect Aligner can transform your life, view some of the problems aligner treatments can solve:

PROUDLY
MADE IN GERMANY

The invisible aligner treatment by K Line Europe

Transparent aligners have taken over the world of straightening teeth. Here is why!

invisible

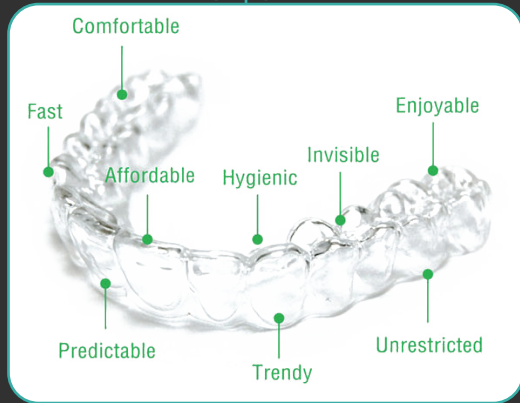

Perfect Aligner are transparent and allow your teeth to be moved into the perfect position nearly invisibly.

predictable

Perfect Aligner enable you to see the digital treatment outcome before you even start wearing them.

removable

Perfect Aligner fit your natural teeth and can be removed at any time. They won't affect your eating habits or your standard oral hygiene.

effective

Perfect Aligner guarantee the best possible smile outcome within a short period of time. Regular visits with your Perfect Aligner provider ensure permanent quality control and allow for correction during treatment.

pain-free

Perfect Aligner come without invasive dental treatments. No shots, no drilling, no pain!

comfortable

Perfect Aligner are custom-made and fabricated from special medically approved plastic sheets in order to provide a perfect fit to your teeth.

The Perfect Aligner principle

Once your dental consultant has decided that Perfect Aligner is the right treatment choice for you, it is very important that the aligners worn every day all throughout the day and at night-time

Within the first month of treatment, you will receive a new set of aligners every week. Different aligner thicknesses ensure that your teeth will move effectively but smoothly at the beginning of the straightening process.

From the second month onwards, your aligners will be replaced every two weeks. Gradually, your teeth will move until the desired treatment result is achieved.

Treatment times with Perfect Aligner vary and depend on each patient's individual alignment problem. However, in the majority of cases straight teeth and a brand new smile can be revealed after only a few months.
